

HANDMADE IN JAIPUR - WORLDWIDE COMMERCE

SEO Handoff and Operating Guide

A practical, implementation-aligned brief for the SEO specialist responsible for growing BOHOBLOCKPRINTED through ethical technical, on-page, ecommerce and content SEO.

Website	https://www.bohoblockprinted.com/
Business	Hand block printed home textiles, fashion, accessories, fabric, wholesale and private label services from Jaipur, India
Primary currency	USD
Document use	SEO onboarding, monthly execution, QA and reporting

Important: No SEO provider can guarantee a number-one Google ranking. The goal is sustainable visibility, qualified traffic, customer trust and measurable revenue growth.

1. Executive Brief

This guide separates the work already implemented in the website from the recurring work owned by the SEO specialist. The website now provides editable SEO controls and crawlable landing pages; the specialist must use them consistently and document every change.

Business positioning

- BOHOBLOCKPRINTED is a Jaipur-based artisan textile brand, manufacturer, exporter and wholesale partner.
- Core product groups include bedding, duvet covers, table linen, bandanas, kaftans, sarongs, bags, curtains and printed fabric.
- Primary commercial themes are handmade quality, Jaipur craft, cotton and linen, worldwide shipping, custom sizes, wholesale and private label services.

What success means

- More qualified organic visits to category, product, wholesale and educational pages.
- Higher impressions and clicks for relevant non-brand and brand queries.
- Growth in organic product views, add-to-cart events, inquiries and completed purchases.
- Accurate indexation with fewer duplicate, thin, filtered or private pages in search.

Ownership split

Owner	Responsibility	Access
Website owner	Approves markets, priority categories, claims, offers and brand language.	Owner access
SEO specialist	Keyword research, page optimization, briefs, content, internal links, Search Console analysis and reporting.	Admin SEO, Search Console, GA4
Developer	Metadata logic, schemas, sitemap, robots, rendering, performance and bug fixes.	Repository and hosting
Content reviewer	Checks accuracy, originality, product fit and brand voice before publishing.	Blog draft access

Never share SMTP passwords, database credentials, GitHub owner credentials or personal email passwords with an SEO contractor. Grant named user access in each platform.

2. Technical SEO Implementation

The website uses Next.js App Router. Metadata is server-rendered for indexable pages and sensitive/private routes are excluded. The SEO specialist should audit outputs, not rewrite application logic.

Implemented route standards

Page type	Canonical pattern	Indexing rule	Structured data
Homepage	/	Index, follow	Organization, WebSite
Shop	/shop	Base page indexed; filtered query combinations noindex, follow	Page metadata
Category	/category/{slug}	Index when active and noIndex is false	CollectionPage, ItemList, BreadcrumbList
Product	/product/{slug}	Index when active and noIndex is false	Product, Offer/AggregateOffer, reviews, BreadcrumbList
Blog article	/blog/{slug}	Only published articles	Article, BreadcrumbList
Account/admin/cart	Private routes	Noindex, nofollow and robots disallow where suitable	None

Required QA every month

- 1 Open Google Search Console Page Indexing and review new errors, soft 404s, duplicate canonicals and crawled-not-indexed URLs.
- 2 Test at least one updated product, category and article using URL Inspection.
- 3 Validate Product and Article markup after template or field changes.
- 4 Check sitemap.xml and robots.txt after deployments.
- 5 Review mobile Core Web Vitals and investigate any new failing URL group.

Do not index combinations such as color, size, rating, sort or price filters as independent landing pages. Create a curated category or editorial page only when a query has real demand and unique content.

3. How to Use the SEO Admin Fields

The developer has added editable product, category and blog SEO controls. These fields allow routine optimization without code changes.

Product fields

Field	How to use it
SEO Title	Unique product title that accurately describes product type, material, pattern or use. Brand may appear at the end.
Meta Description	Concise selling summary. Include the main benefit and product identity; avoid lists of repeated keywords.
Social Sharing Image	Use the best clean hero image. If empty, the first product image is used.
Image Alt Texts	Describe what is visibly shown in each image. Separate entries in the admin field as instructed.
Additional SEO Content	Original helpful details about material, craft, care, use and styling. Never paste generic filler.
Hide from search engines	Use for duplicates, temporary/custom listings or pages that should not appear in public search.

Category fields

- Write a category-specific title and meta description.
- Add accurate image alt text and an optional social image.
- Use Additional SEO Content for a genuine buying guide: materials, sizes, use cases, care and selection advice.
- Never publish an empty category only to target a keyword.

Blog fields

- Draft first; publish only after factual, spelling, image-rights and internal-link review.
- Use one descriptive H1 from the post title. In the editor, use '##' for H2 and '###' for H3 lines.
- Set a related category slug so the article sends readers to a commercial next step.
- Use descriptive featured-image alt text; do not stuff keywords into alt attributes.

4. On-Page SEO Standard

Page targeting rules

Page	Primary intent	Content expectation
Homepage	Brand plus broad commercial	Clear identity, main collections, Jaipur origin and trust paths
Category	Commercial investigation	Collection introduction, product grid, buying guidance and internal links
Product	Transactional	Accurate title, price, variants, images, material, delivery, reviews and related products

Page	Primary intent	Content expectation
Blog	Informational	Complete answer based on experience, original images where possible and relevant commercial links
Wholesale	B2B lead generation	Capabilities, buyer types, process, MOQ context and direct inquiry path

Title and description checklist

- Every indexable URL receives a unique, accurate title and description.
- Write for the likely visitor decision, not for a keyword counter.
- Avoid repeating the same boilerplate across hundreds of products.
- Do not claim organic, sustainable, certified, tax-free or handmade attributes unless the business can substantiate them.

Images

- Use the correct product and color in every gallery. Remove unrelated images.
- Choose sharp, well-lit images and preserve useful detail on mobile.
- Alt text describes the actual visible image; decorative images should not receive promotional keyword text.
- Do not copy images or customer photos without permission and retained proof of usage rights.

Internal linking

- Each blog article links to one relevant category, selected products and one related article.
- Category pages link to products and relevant guides.
- Product pages keep related products in the same category or close product family.
- Use descriptive link text such as 'linen duvet cover size guide', not repeated 'click here'.

5. Keyword Mapping Template

Maintain one shared keyword map. One URL should own one primary search intent; do not optimize multiple pages against each other for the same query.

Target URL	Primary query	Intent	Status	Next action
/category/duvet-covers	hand block printed duvet covers	Commercial	Fill after research	Optimize category copy and internal links
/category/bandanas	block print cotton bandanas	Commercial	Fill after research	Confirm product range and US demand
/wholesale	hand block printed textiles wholesale	B2B	Fill after research	Strengthen proof and inquiry path
/blog/how-to-care-for-linen-bedding	how to care for linen bedding	Informational	Proposed	Create original care guide

The final keyword map must include country, monthly demand, business relevance, current position, target URL, content owner, last updated date and conversion action.

6. Blog Publishing Workflow

- 1 Choose a topic from Search Console demand, customer questions, product support needs or verified keyword research.
- 2 Assign one primary intent and one target category. Check that an existing page does not already answer the same query.
- 3 Create a brief with audience, question, outline, evidence, original examples, images and required internal links.
- 4 Write a people-first draft. Do not copy Etsy listings, competitor articles or AI output without expert review and substantial original value.
- 5 Upload a rights-cleared featured image and write descriptive alt text.
- 6 Complete title, excerpt, SEO title, meta description, author, related category and publication state.
- 7 Review on mobile and desktop, validate schema, publish and request indexing when strategically important.
- 8 After 6-12 weeks, review queries, CTR and engagement; improve the article based on evidence.

Recommended initial editorial themes

Theme	Example article	Commercial connection
Craft education	What Is Jaipur Hand Block Printing?	Process, About, all collections
Bedding help	Cotton vs Linen Duvet Covers	Duvet Covers, Linen Bedding Sets
Sizing	How to Choose a Duvet Cover Size	Product size options
Care	How to Wash Hand Block Printed Textiles	Bedding, table linen, fashion
Styling	Ways to Style a Cotton Bandana	Bandanas
Table	How to Choose a Tablecloth Size	Tablecloths and table linen
B2B	How to Source Private Label Block Print Textiles	Wholesale inquiry

Publishing target: begin with 2-4 thoroughly reviewed articles per month. Quality, originality and usefulness are more important than an arbitrary word count or posting volume.

7. Ecommerce SEO Workflow

Before optimizing a product

- Confirm product name, material, color, size variants, USD prices, inventory and images are accurate.
- Confirm reviews are genuine and associated with the correct product. Do not create or import fabricated feedback.
- Check that the product belongs to the correct category and that the category has a useful indexable landing page.
- Use canonical product URLs and never create duplicate pages for each filter combination.

Product schema rule

Structured data must match visible page content. Price, currency, stock, ratings and review counts must be updated from the same product data shown to shoppers. A rich result is never guaranteed.

Out-of-stock and discontinued pages

- Temporarily out of stock: keep the page live when restocking is expected and show honest availability.
- Permanently discontinued with a close replacement: use a relevant redirect only when user intent is truly equivalent.
- No equivalent replacement: keep a useful discontinued page or return a proper 404/410 according to the product policy.

8. Measurement and Monthly Reporting

Report outcomes and decisions, not only completed tasks. Separate brand queries from non-brand queries where possible.

Metric	Source	Why it matters
Organic clicks and impressions	Search Console	Visibility and qualified discovery
CTR by landing page/query	Search Console	Search snippet and intent fit
Average position	Search Console	Directional trend, not a standalone success metric
Indexed/excluded URLs	Search Console	Technical health and crawl control
Organic engaged sessions	GA4	Visitor quality
Product views/add-to-cart/purchases	GA4/ecommerce	Commercial outcome
Wholesale form submissions	Admin/analytics	B2B lead outcome
Core Web Vitals	Search Console/PageSpeed	Mobile experience

Monthly report format

- 1 Executive summary: what improved, what declined and why.
- 2 KPI comparison: current month, previous month and same period where available.
- 3 Top winning and declining pages and queries.
- 4 Indexing, schema, broken link and performance findings.
- 5 Content published or improved, with exact URLs.
- 6 Backlinks or digital PR earned, with source quality and landing URL.
- 7 Conversion impact and next-month priorities.

9. First 90-Day Operating Plan

Period	Focus	Deliverables
Days 1-15	Baseline and access	Search Console/GA4 verification, crawl, index audit, keyword map, priority category list, measurement baseline
Days 16-30	Commercial pages	Homepage review, priority category optimization, priority product QA, internal links, schema validation
Days 31-60	Content and authority	First 4-6 original guides, refreshed category content, image optimization, legitimate outreach targets

Period	Focus	Deliverables
Days 61-90	Evidence-led refinement	CTR tests, query-gap updates, declining-page fixes, second content batch, performance report and next-quarter plan

10. Prohibited and High-Risk Practices

Reject any proposal that depends on the following:

- Guaranteed number-one rankings or guaranteed traffic without a documented paid-media plan.
- Private blog networks, bulk paid links, automated forum/comment links or irrelevant directory packages.
- Keyword stuffing, hidden text, doorway pages or hundreds of near-identical city/country pages.
- Fake reviews, altered ratings or structured data that is not visible and genuine on the page.
- Copied Etsy descriptions, competitor blogs, customer photographs or other copyrighted material without permission.
- Granting an agency full email, domain, database, hosting-owner or financial-account passwords.

Any SEO provider should document link acquisition methods, content authorship, image rights and every changed URL. The site owner must be able to revoke access without changing shared passwords.

11. Acceptance Checklist

Use this list before approving SEO work or a monthly invoice.

Done	Acceptance item
☐	Every changed page has a documented target query and user intent.
☐	Titles, descriptions and visible copy are unique, accurate and grammatically reviewed.
☐	Product/category/blog URLs use the correct canonical and indexing rule.
☐	No private, filter, account, cart or admin URL was intentionally submitted for indexing.
☐	Images are relevant to the correct product/color and have accurate alt text.
☐	Internal links point to live, relevant URLs and use descriptive anchor text.
☐	Product and article schemas pass validation and match visible content.
☐	Published blogs contain original value and a related commercial next step.
☐	Search Console and analytics annotations/reporting identify the date and scope of changes.
☐	No credential or secret was placed in source code, reports, chat messages or shared sheets.

12. Access, Security and References

Recommended access method

- Google Search Console: add the specialist as a named user with the minimum required permission.
- GA4: grant analyst/editor access only as needed.
- Website admin: create a named account; do not share the owner's account.
- SMTP and email OTP: developer/hosting secret only. Use a Google App Password or a production transactional mail provider.
- GitHub and hosting: developer access only unless the SEO task specifically requires deployment work.
